IHS Data Manager

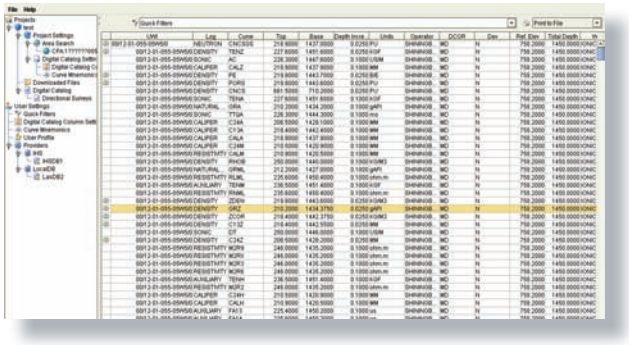
One Application Access to Complete Log Data

Query, browse and download IHS and in-house digital data to your desktop.

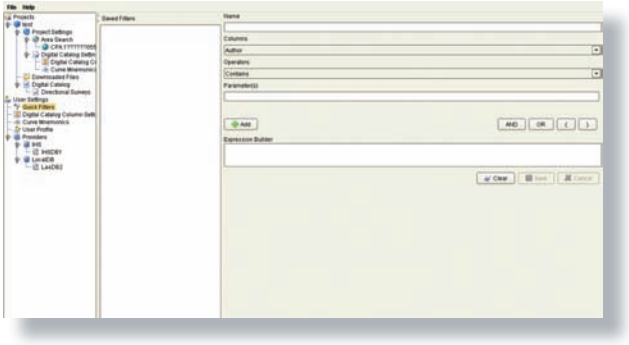
IHS Data Manager is the replacement application for LogAxxses. Data Manager delivers IHS log data to your desktop faster than ever before. When paired with IHS Information Hub Direct Connect, Data Manager provides access to all available log data, allowing you to spend your time making plays rather than gathering data.

Get your data quickly

Data Manager's Quick Filter reduces the time spent looking for curves. Rather than contending with mountains of data, see the information you need to complete your tasks; measured depth (MD), true vertical depth (TVD), geophysical or high resistivity curves.



Use the Digital Catalog to see all of the curves available in your areas of interest.

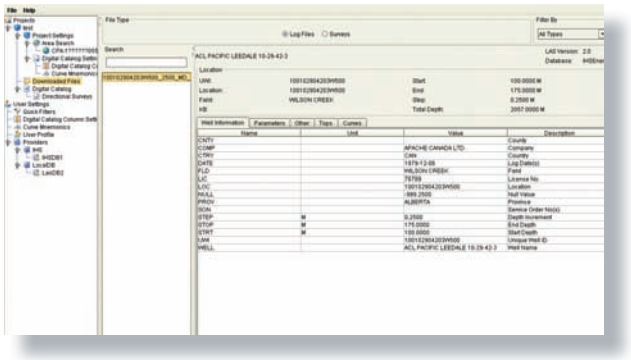


Quick Filter allows you to filter curves and see only those of interest.

Get your data in the form you want

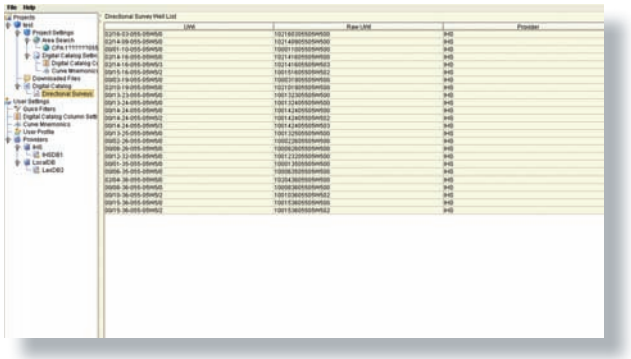
Data Manager's advanced merging criteria allows you to control how runs are merged, enabling you to use your business logic when gathering, reformatting and downloading data—methods you disagree with are not imposed upon you.

View your log data within Data Manager.



View information from the log header of downloaded curves.

Gather your directional surveys within Data Manager.



Gather all the Directional Surveys downloaded and ready-formatted for use.

Begin taking advantage of Data Manager and realize time savings today.

Call your Account Executive at 403.770.4646 for more information.
