

IHS Data Management Services (DMS)

The Source
for Critical Information and Insight™

Growing from the leader in the Canadian data industry to the leader of data management.

IHS has the most up-to-date and comprehensive E&P data available anywhere in Western Canada, the Frontiers and Northern US. Our goal is to continue adding best-of-breed data sets and innovative software tools based on customer feedback, that bring even more accurate, timely and comprehensive information to the desktop.

It is only natural that IHS grow from bringing our clients the most up-to-date and comprehensive data to providing a service to manage it.

Your Critical Problem

E&P companies do not have the time or dedicated resources to build in-house expertise and structure for complete data management. Also, without one source to manage the data, information is sporadically stored in locations as varied as personal desktops and spreadsheets on company network drives.

Our clients have asked IHS for a decision support framework and configurable offering of Data, Software and Services to support and streamline the decision making process in their companies.

We've responded with DMS.

DMS provides assistance to companies in streamlining the decision support process by addressing the questions:

- What Data do I have?
- Where is the Data?
- How current is the Data?
- What quality is the Data?
- What format is the Data in?

DMS offers deliveries of customized data with the option for maintenance updates. Spatial and GIS data offerings and data conversions are also available. From smaller transactional requests to the largest of projects, ask for details or a quote on any of the above services, or the following products:

- Township Plats
- GIS Plats
- Custom Maps
- Index Maps
- Plotting Service
- IHS Well Documents
- Well Cards
- Production Histories
- Production Graphs
- Unit Production
- Core Analysis
- Directional Survey
- DST
- Title Searches
- Sales Analyst Reports
- Custom Reports
- Activity Calendar

Data Integration

- Integrate public and proprietary data
- Manage in-house well data and IHS data with Well Master
- Integrate with third party software to ease the flow of information

Leveraging Strength

- Leverage the IHS high quality data sets with industry knowledge and dedication to client satisfaction
- Manage proprietary data sets including:
 - > Formation Tops
 - > Production
 - > Core Analysis
 - > Fluid Analysis
 - > Drill Stem Tests
 - > Directional Surveys
 - > International and domestic wells management
 - > Digital and Raster Log Management

Data Consolidation

- Support the flow of information into and through one dedicated decision support framework

Bringing consistency, reliability, and quality to all data types.

With over 75 years of experience in the Oil and Gas Community, the IHS DMS team is armed with the resources and expertise to deliver a decision support framework tailored to your needs
